

PATENT CLAIMS

1. A vibrator (1) for sexual stimulation and having a device (2) for producing vibrations, characterized in that the vibrator (1) is fittable on a penis (12), in particular on a penis tip (13).

2. The vibrator according to claim 1, characterized in that it can be retained on a penis (12), in particular on a penis tip (13).

3. The vibrator according to one of the preceding claims, characterized in that it has an outer end (3) forming the tip of the vibrator and holding in particular at least one device (2) for producing vibrations and a middle region (4) that fits on a penis (12), in particular on a penis tip (13).

4. The vibrator according to one of the preceding claims, characterized in that the middle region (4) is hollow and has at the tip of the vibrator (1) a recess (5) in particular serving as reservoir for ejaculate.

5. The vibrator according to one of the preceding claims, characterized in that at least the middle region (5) is formed of an elastic material which fits to the outside of at least the penis tip (13).

6. The vibrator according to one of the preceding claims, characterized in that the middle region (4) extends or can extend from the penis tip (13) at least over a portion of the penis shaft.

5 7. The vibrator according to one of the preceding claims, characterized in that the middle region (4) is constituted as an elastic sheath (7) which is rolled up and which can be drawn or rolled down over the penis (12).

10 8. The vibrator according to one of claims 1 to 6, characterized in that the middle region (5) is formed with a hollow extension (6) in particular of an elastic material that partially or completely receives a penis (12) and which in particular is provided with a device (2) for producing vibrations.

15 9. The vibrator according to claim 8, characterized in that at an open end of the hollow extension (6, 6a, 6b) there is at least one device (14) for producing vibrations, in particular in or on a thickened ring (11).

20 10. The vibrator according to claim 9, characterized in that in or on the thickened ring (11) there are several devices (14) for producing vibrations that are uniformly distributed around the periphery of the ring (11).

11. A condom, characterized in that it has a condom tip provided with at least one device (2) for producing vibrations.

5 12. The condom according to claim 11, characterized in that it has an open condom end provided with at least one device (14) for producing vibrations.

10 13. The vibrator or condom according to one of the preceding claims, characterized in that a device (2 or 14) for producing vibrations includes a vibratory motor (8) and in particular an energy source (9).

14. The vibrator or condom according to one of the preceding claims, characterized in that the energy source (9) can be replaced.

15 15. The vibrator or condom according to one of the preceding claims, characterized in that a switch (10) is provided for turning the vibratory motor (8 or 14) on and/or off.

20 16. The vibrator or condom according to claim 15, characterized in that the switch (10) is formed by a button and/or a temperature-controlled switching device that is in particular operated when it reaches body temperature.
